Copy writing	-	proficient
Visual FX (After Effects)	-	proficient
Linux / Apache server management	-	competent
Tea drinking	-	expert

Personal statement

Having worked as a Developer and Commercial Assistant for the past two and a half years at an agency in the United Kingdom - I have enhanced and refined my skillset in the industry, to allow myself to effectively manage and develop an assortment of web-based applications. With years of experience and expertise in development and managing small development teams; I can now offer my services as a freelancer - specialising in front-end development and development project management.

Employment history

Remote Freelance Web Developer, NLS Ltd, alchemy-rx.com

February – March 2019

- Approached by NLS Ltd to develop a one-page website full of complex animations and interactivity.
- The project relied heavily not only programming ability, but my ability to self-manage my time for a long period, following an agile management model.
- The project was a great success - with praise from both the agency and the client. Praise included mentions of the final product going above and beyond the expected outcome, accompanied by my ongoing hasty communications and detailed time logs of development.

Developer and Commercial Assistant, NLS Ltd, Brighton, United Kingdom

November 2016 – January 2019

- My role consisted of 75% development and 15% management.
- The development in my role was predominantly front-end. However, my responsibilities in this field also expanded to utilising the full array of my technological skillset.
- Management responsibilities included leading client-meetings and communications, agile scrum master of small development and design teams and documentation creation.
- Outside of these two fields my role would promote the use of my web design ability and copy-writing skills for news stories and site content.
- Successfully directed and implemented numerous projects; from conception, proposal, initial client meetings - through to designs, implementation of development and conducting 'phase 2' negotiations.

Computing Teacher/Tutor, FunTech, Multiple Locations across United Kingdom

July 2013 – September 2016 (During graduate study)

- Identifying and assessing student needs with the delivery of computing courses, ranging from Java computer programming through to 3D modelling and design.
- Private tuition given to a 24-year-old university student, studying Computer Science who later went on to get the highest grade possible in the module I was training him for.
- Currently have a 3-year valid first aid training certificate.
